

**Figure 2.** Number of children experiencing various frequencies of horse related painful incidents ( $n_{child} = 123 - 124$ ,  $n_{parent} = 117 - 122$ ). Please note that “unexpected riding” and “unexpected handling” represent reports of painful incidents occurring when the horse did something unexpected while riding (e.g., bucked) or handling (e.g., spook), respectively.
