

The Future of WBBE?

- Can we extrapolate findings to watersheds in the Lake Erie or Lake Huron Basin?
- Where can existing models be improved to represent Ag BMPs?
- Improve our understanding of winter/early spring hydrology and pollutant loadings
- Help identify new practices/locations for landowners to evaluate/test on-farm (e.g. cover cropping, grass strips)
- Compare land and crop management practices in US Great Lakes Basins with Canadian Great Lakes basins (using similar modelling tools)
- Test and improve low-cost field monitoring techniques to build datasets for BMP evaluation and model improvements
- Workshop to engage USA and Canadian researchers to share lessons learned
- Workshops to share lessons learned with landowners
- Analyse data to determine priority areas for BMP implementation
